

PROJECT PAPER.

THESIS, LAUNCH & RISK.

A factual record for the human side of an automated internet.

09 AUG 2026

PRE-LAUNCH DISCLOSURE PAPER

[HUMAN404.IO/WHITEPAPER](https://human404.io/whitepaper)

READ THIS FIRST.

This informational pre-launch disclosure paper records current status, intended operations, and material risks. The website is the canonical and most current version.

IMPORTANT

No \$HUMAN token is live, no official mint address exists, and no funds are accepted through human404.io. This informational Project Paper describes current pre-launch status, intended operations, and material risks. It is not an offer, solicitation, prospectus, recommendation, or promise of any price, return, liquidity, listing, utility, or outcome.

01 / EXECUTIVE SUMMARY

STATUS BEFORE STORY.

HUMAN 404 is building a public cultural record first. Any token remains a planned layer, not a finished product or guaranteed outcome.

HUMAN 404 is an internet-native culture network examining authorship, identity, participation, and belonging in an increasingly automated internet. The project currently consists of a public website, editorial Journal, official communication channels, a visual identity, and a working launch and safety framework.

\$HUMAN is the planned symbol for a public Solana culture token associated with that identity. If created, it would be a transferable onchain asset. It would not represent equity, debt, governance rights, revenue share, intellectual-property ownership, redemption rights, protocol access, guaranteed utility, or a promise of financial return.

The intended route is a public Pump.fun creation flow with no presale, private round, paid whitelist, or administrator purchase link. Actual onchain and economic facts will be published only after they can be checked against the confirmed transaction and public chain state.

CURRENT FACTS

PROJECT	HUMAN 404	Culture network and public project identity
PLANNED ASSET	\$HUMAN	Not created and not available for purchase
NETWORK	SOLANA	Planned network; no official mint exists
PUBLIC ROUTE	PUMP.FUN	Planned route; no live market
PLANNED SUPPLY	1,000,000,000	Project parameter; verify exact supply onchain after creation
PRESALE	NONE	No private sale or early-access purchase route
TREASURY	NONE AT LAUNCH	No private token treasury allocation is planned
OFFICIAL MINT	NOT PUBLISHED	Any current mint claiming this identity is unofficial

This paper describes current intentions, policies, and unresolved fields. It must not be read as evidence that a launch will occur or that a market will form.

02 / PROBLEM CONTEXT

ABUNDANT OUTPUT. SCARCE CONTEXT.

HUMAN 404 examines authorship, accountability, taste, memory, and belonging when automated output can reproduce the surface of human expression.

Automated systems can produce text, images, audio, code, and interaction at a scale that makes the surface of human and machine output increasingly difficult to distinguish. HUMAN 404 does not claim that a blockchain proves personhood, authenticates every participant, or captures lived experience.

A public chain can make a mint, transaction, and selected wallet activity observable. It cannot create trust, guarantee community, or establish value. The project therefore treats transparency as an operating discipline, not a technological promise.

PROJECT PRINCIPLES

01 FACTS BEFORE MOMENTUM A planned feature is labeled planned. An onchain fact is published only after it can be independently checked.	02 ONE CANONICAL RECORD Human404.io is the root record for status, addresses, policies, corrections, and official links.
03 PUBLIC ACCESS No private round, paid whitelist, administrator purchase route, or early allocation.	04 TRACEABLE CONTROL Project wallets, creator activity, related holdings, and the fee recipient are disclosed when they exist.
05 NO MANUFACTURED MARKET No knowingly fabricated volume, hidden related position, or paid activity presented as independent demand.	06 CULTURE IS NOT PAYWALLED Reading, discussion, creative participation, and community contribution do not require token ownership.

These principles guide project communication and conduct. They cannot remove market, platform, custody, legal, operational, or third-party risk.

03 / ASSET + ECOSYSTEM

DEFINE THE ASSET. SEPARATE THE LAYERS.

The token, if created, is one symbolic layer of the project. Cultural participation is not a holder-only privilege.

IF CREATED A TRANSFERABLE CULTURAL ASSET A public Solana token associated with the HUMAN 404 symbol and culture. Its initial stated function would be social and cultural association around a shared public identity.	IT WOULD NOT BE A CONTRACTUAL RIGHT OR GUARANTEE No equity, debt, ownership, dividend, revenue share, redemption, governance vote, yield, guaranteed utility, listing, liquidity, price, or return. Holding it would not verify that a person is human.
--	---

HOLDER RELATIONSHIP

Holding \$HUMAN would create no partnership, agency, fiduciary relationship, employment relationship, or right to direct HUMAN404. Community input may be considered but is advisory. Public discussion, editorial work, art, translation, moderation, and cultural activity do not require token ownership.

ECOSYSTEM STATUS

WEBSITE	LIVE	Canonical project information, status, safety, and brand assets.
HUMAN JOURNAL	LIVE	Original editorial on AI, crypto markets, identity, and culture.
COMMUNITY	LIVE	Official X, Telegram announcements, and community discussion.
\$HUMAN TOKEN	PRE-LAUNCH	Planned Solana culture token; no official mint exists.
HUMAN ID	CONCEPT	Exploratory browser interaction; not identity or biometric verification.
OBJECTS + IRL	FUTURE	Proposed physical and in-person formats; no delivery commitment.

04 / PUBLIC LAUNCH MODEL

ONE PUBLIC ROUTE. ONE EVIDENCE TRAIL.

The intended process separates preparation, creation, verification, publication, and post-launch disclosure. It does not guarantee that a launch will proceed.

01 PRE-CREATION FREEZE

Confirm final name, ticker, media, official links, planned settings, wallet roles, and disclosure text before signing. No draft mint is published.

02 PUBLIC CREATION

Use the intended public Pump.fun flow on Solana if the platform and settings remain acceptable. No private purchase route is offered.

03 EVIDENCE CAPTURE

Record the complete mint, creation transaction, platform URL, creator wallet, signed configuration, and creator purchase transaction.

04 INDEPENDENT CHECK

Match the mint and transaction across the creation platform and a Solana explorer. Inspect program, supply, decimals, authorities, and metadata control.

05 SITE-FIRST PUBLICATION

Publish the verified record on human404.io/token first. Official social channels link back only after the site record is live.

06 POST-LAUNCH RECORD

Publish the actual creator purchase, resulting percentage, every project-controlled or founder-beneficial wallet holding \$HUMAN, the fee recipient, and any variance from the plan.

PUBLICATION HOLD

If the creation record, mint, configuration, or wallet evidence cannot be reconciled, HUMAN404 will not describe the asset as verified. The record should be corrected or the discrepancy disclosed before official distribution.

A public launch model does not make market participation fair, safe, liquid, or profitable. Third-party trading and transaction ordering remain outside project control.

05 / VERIFICATION PROTOCOL

VERIFY THE RECORD. NOT THE NOISE.

A launch claim remains unverified until asset identity, transaction evidence, token state, and project-controlled economic relationships have been checked.

01 SOURCE HIERARCHY

Begin at human404.io. A ticker, logo, search result, social reply, screenshot, or forwarded message is not proof of authenticity.

02 COMPLETE MINT MATCH

Compare every character of the mint between human404.io/token, the official Pump.fun page, and a Solana explorer.

03 TRANSACTION FINALITY

Record and check the confirmed creation transaction before describing the asset as created or publishing launch notices.

04 TOKEN STATE

Record the token program, total supply, decimals, mint authority, freeze authority, and metadata or update authority.

05 ECONOMIC POSITION

Record the creator wallet, actual creator purchase, resulting holdings, every project-controlled or founder-beneficial wallet holding \$HUMAN, and the creator-fee recipient.

06 VARIANCE DISCLOSURE

If the signed transaction differs from this plan, publish the actual result and explain the variance instead of preserving the plan silently.

07 CORRECTION CONTROL

A material error triggers a dated web correction and version note. Social corrections point back to the canonical record.

SOURCE ROLES

HUMAN404.IO	CANONICAL	Project status, complete official mint, policies, and corrections
PUMP.FUN	CREATION SOURCE	Official creation interface, signed configuration, and market URL
SOLANA EXPLORER	ONCHAIN CHECK	Independent public inspection of address, transaction, and token state
OFFICIAL SOCIALS	DISTRIBUTION	Notices that link back to the canonical site; not a substitute for the mint record

DISCLOSE THE ECONOMIC POSITION.

No presale means no private sale. It does not mean a creator wallet can never hold tokens or receive platform-determined fees. Each relationship is recorded separately.

PRESALE	NONE	No private sale, paid whitelist, or early-access allocation route
PLANNED SUPPLY	1,000,000,000	Project parameter; replace with exact onchain supply and decimals
CREATOR WALLET	DECLARED PRE-LAUNCH	Public address: BpACNmiNY9icHEH1RBGP4T5p9XaVWqRWHL7G5ju7QLgV. Control and launch use remain subject to the signed creation transaction
CREATOR PURCHASE	PLANNED 0.05 SOL	One public-flow purchase; publish SOL input, tokens, percentage, and transaction
FIRST 24 HOURS	ONE PROJECT BUY	No additional project-controlled purchase is planned during the first 24 hours
RELATED WALLETS	DISCLOSE AT LAUNCH	Every project-controlled or founder-beneficial wallet holding \$HUMAN, with address, position, percentage, and relationship
TOKEN TREASURY	NONE AT LAUNCH	No private allocation or pre-funded token treasury
CREATOR FEES	PUBLIC FEE WALLET	Pump.fun determines eligibility and rates; any recipient is publicly identified
CASHBACK / MAYHEM	OFF / OFF	Current plan; the signed creation configuration controls
LOCK / VESTING	NO CLAIM WITHOUT PROOF	No lock, vesting, burn, or renunciation claim without verifiable evidence

RELATED WALLET

A wallet controlled by or for the founder, public project operator, or a future project treasury. This definition does not include an unaffiliated holder merely because that holder interacts with the project.

Creator fees, if any, create no dividend, yield, revenue share, redemption right, or other holder entitlement. Platform rules and fee rates can change without project control.

07 / OPERATING MODEL

FOUNDER-DIRECTED. PUBLICLY DOCUMENTED.

HUMAN404 is the public project identity responsible for the website, official communications, launch decisions, and this disclosure paper.

PUBLIC IDENTITY	HUMAN404	No separate incorporated entity is represented
DECISION MODEL	FOUNDER-DIRECTED	Strategy, launch, communications, wallet policy, brand, and document revisions
TOKEN GOVERNANCE	NONE	No vote, veto, proposal, fiduciary claim, or project-control right
COMMUNITY INPUT	ADVISORY	May inform decisions; not binding and creates no agency or partnership
PUBLIC RECORD	WEBSITE-FIRST	Material status, wallet, authority, fee, treasury, and policy changes
KEY MATERIAL	NEVER PUBLIC	Only public addresses and transactions; never seed phrases or private keys
PUBLIC CONTACT	<u>INFO@HUMAN404.IO</u>	Corrections, rights questions, and responsible disclosure

BRAND + INTELLECTUAL PROPERTY

The project operator owns or controls the rights in the HUMAN 404 website, logo, brand system, and project-created materials, except for identified third-party components and contributor works. Third-party and contributor works remain with their original creators unless a written agreement states otherwise.

Acquiring or holding \$HUMAN would not transfer copyright, trademark, design, domain, publicity, merchandising, editorial, software, endorsement, or other commercial-use rights. Community work must be clearly unofficial and must not imply an alternate mint, partnership, endorsement, or authority to speak for the project.

Nothing in this section claims a registration that has not been obtained. Rights arise from applicable law, authorship, ownership, contract, and any specific asset license.

08 / MATERIAL RISK FRAMEWORK

THE RISK IS NOT ABSTRACT.

Disclosure cannot make a memecoin safe, suitable, or valuable. Risks can interact, emerge without warning, and result in complete financial loss.

MARKET	RISK AREA	Price, liquidity, volatility, slippage, concentration, and total loss
TECHNICAL	RISK AREA	Platform, contract, token-program, configuration, authority, and data failures
CUSTODY + OPS	RISK AREA	Key loss, approvals, compromise, human error, and key-person dependency
INTEGRITY	RISK AREA	Impersonation, false claims, market manipulation, and incentive conflicts
EXTERNAL	RISK AREA	Changing laws, taxes, platform rules, integrations, and third-party conduct
EXECUTION	RISK AREA	Delay, scope reduction, discontinuation, and no assured utility

DETAILED RISK REGISTER

RISK / 01 TOTAL LOSS A memecoin can lose all market value. Cultural attention, community activity, and accurate disclosure do not establish fundamental value or a recoverable floor.	RISK / 02 LIQUIDITY + VOLATILITY Liquidity may be thin or disappear. Prices may move sharply, transactions may suffer slippage, and exiting may be difficult or impossible.
RISK / 03 CONCENTRATION + RELATED PARTIES Founder, creator, treasury, or related wallets may hold a material share. Purchases, sales, transfers, or loss of control can affect liquidity and confidence.	RISK / 04 FEE + INCENTIVE CONFLICT Creator-linked fees and rewards can create incentives different from holder interests. Amounts, eligibility, and recipients may change.
RISK / 05 PLATFORM + CONTRACT Creation, routing, liquidity, custody, and market data depend on third-party platforms and smart contracts that can fail, change, or be exploited.	RISK / 06 AUTHORITY + CONFIGURATION Incorrect metadata, supply settings, retained authorities, optional modes, or a mistaken transaction may be difficult or impossible to correct.

HUMAN404 can improve disclosure, source verification, wallet separation, and correction discipline. It cannot control price, liquidity, Solana, Pump.fun, wallets, holders, regulators, attackers, or future market conditions.

08 / MATERIAL RISKS / CONTINUED

CONTROL WHAT CAN BE DISCLOSED. NAME WHAT CANNOT BE CONTROLLED.

RISK / 07 CUSTODY + TRANSACTION Signed transactions may be irreversible. Lost keys, malicious approvals, phishing, address substitution, and user error can cause permanent loss.	RISK / 08 THIRD-PARTY MARKET CONDUCT Unaffiliated parties may manipulate markets, create concentrated positions, list the token, build integrations, or make claims the project cannot control.
RISK / 09 IMPERSONATION Names, tickers, logos, profiles, domains, posts, and websites can be copied. Only a complete verified mint identifies a specific Solana token.	RISK / 10 REGULATORY + TAX Rules and tax treatment vary by person and jurisdiction and may change. Independent professional advice may be appropriate.
RISK / 11 KEY-PERSON + OPERATIONS The project may depend on a small number of people, devices, accounts, and wallets. Loss of access, incapacity, conflict, or discontinuation can interrupt it.	RISK / 12 EXECUTION Plans may be delayed, reduced, changed, or discontinued. A roadmap label, public statement, or working paper is not a delivery commitment.
RISK / 13 IP + BRAND Brand, editorial, software, and community materials may be copied, disputed, misused, or removed. Token ownership does not resolve intellectual-property rights.	RISK / 14 NO ASSURED UTILITY \$HUMAN is not presented as equity, governance, revenue share, yield, redemption, protocol access, or a claim on project assets.

NO RELIANCE

No person should rely on this paper as the sole basis for a financial, legal, tax, technical, or security decision. Independent verification is required. Third-party summaries, screenshots, search results, direct messages, and copied documents may be incomplete, malicious, or outdated.

09 / OFFICIAL SOURCES

VERIFY AT THE SOURCE.

Human404.io is the canonical project record. Telegram announcements are the official social notice channel.

WEBSITE	<u>HUMAN404.IO</u>	Canonical status, paper, token record, and safety guidance
X	<u>@HUMAN404IO</u>	Public editorial and project communication
TELEGRAM	<u>@HUMAN404IO</u>	Official announcements and launch notices
DISCUSSION	<u>@HUMAN404IOTALLK</u>	Secondary community conversation
EMAIL	<u>INFO@HUMAN404.IO</u>	Corrections and project contact

09.1 / DOCUMENT GOVERNANCE

VERSIONED. DATED. CORRECTABLE.

01 Maintainer

HUMAN404 maintains the canonical online paper and downloadable edition.

02 Material update triggers

Token status, mint, controls, supply, wallets, related holdings, fees, treasury policy, project control, rights, ecosystem status, or a material correction.

03 Publication sequence

The website is updated first after verification. Official social notices then link back to the canonical record.

04 Prior copies

Downloaded PDFs remain historical copies. If a PDF conflicts with the current website, the current dated online version controls.

05 Corrections

Factual corrections may be reported to info@human404.io. A material correction requires a dated version note.

06 Archival limit

Screenshots, cached pages, search snippets, and third-party summaries may be incomplete or outdated and are not controlling records.

VERSION 0.3 CHANGE SUMMARY

Reorganized the paper around an executive summary, problem context, operating principles, public launch model, supply and economic record, founder-directed operating model, governance limits, structured verification protocol, risk taxonomy, post-creation evidence record, and reviewed primary-source references. No launch status changed.

A / POST-CREATION ONCHAIN RECORD

PENDING UNTIL VERIFIED.

This paper remains a pre-launch version 0.x until these fields are completed from the confirmed creation transaction and official onchain record.

FIELD	DECLARED STATUS	VERIFICATION BASIS
MINT ADDRESS	PENDING	Complete Base58 address; verified at creation
CREATION TRANSACTION	PENDING	Confirmed Solana transaction signature
OFFICIAL PUMP URL	PENDING	Canonical public market page
EXPLORER URL	PENDING	Solana explorer record
TOKEN PROGRAM	PENDING	Verified program owner
TOTAL SUPPLY	PENDING	Onchain confirmed value
DECIMALS	PENDING	Onchain confirmed value
MINT AUTHORITY	PENDING	Retained, revoked, or platform-determined
FREEZE AUTHORITY	PENDING	Retained, revoked, or platform-determined
METADATA AUTHORITY	PENDING	Verified update/control status
CREATOR WALLET	DECLARED	Pre-launch public address: BpACNMiNY9icHEH1RBGP4T5p9XaVWqRWHL7G5ju7QLgV; verify control and launch use from the signed creation transaction
CREATOR PURCHASE	PLANNED 0.05 SOL	Replace with actual input, token amount, percentage, and transaction
RELATED WALLETS	PENDING	Every project-controlled or founder-beneficial wallet holding \$HUMAN
CREATOR-FEE RECIPIENT	PENDING	Address and platform configuration
TOKEN TREASURY	NONE AT LAUNCH	Any later treasury requires a new disclosure

No estimate, screenshot, draft address, ticker match, logo match, or social reply is a substitute for the confirmed complete mint and transaction record.
